

POSTMAN API COLLECTION EXECUTION REPORT

GenAI API Testing & Prompt Engineering Requests Submission

TOTAL REQUESTS: 9 Executed Requests	TOTAL SCREENSHOTS: 23 Captures	EXECUTION STATUS: 200 OK (All Passed)
--	-----------------------------------	--

Assignment Execution Summary

- **Collection API Provider:** Groq Cloud API (OpenAI Compatible Endpoints)
- **Executed Workflows:** Test Case Generation, Selenium Code Automation, Token Controls, Temperature Creativity Analysis, Transcriptions, Guardrails & Prompt Injection Testing, and Multimodal Vision OCR.
- **Submission Requirement:** Consolidated screenshot verification report ready for GitHub repository upload.

Endpoint: POST <https://api.groq.com/openai/v1/chat/completions> | Model: openai/gpt-oss-120b

Executed API call to generate structured test cases and acceptance criteria traceability from user stories.

GenAI-Aug > S01-GenerateTestcasesfromUserStories

Billing Coordinator is logged into the system with appropriate role.
2. Patient record exists with valid insurance information (plan ID, member ID, DOB).
3. Radiology test (CT, MRI, or ultrasound) is selected but not yet scheduled.
4. Insurance API mock/stub is configured to return a **covered** response.\n\n**Test Data**\n\nPatient ID: **P12345**
Test Type: **MRI - Brain**
Insurance Plan: **XYZ-Gold**\n\n**Steps**\n\n1. Navigate to **Patient -> Radiology -> Schedule Test**.
2. Select the test (MRI - Brain).
3. Click **Schedule Test** button.
4. Observe system behavior.\n\n**Expected Results**\n\n1. System initiates an **HTTPS POST** to **/insurance/eligibility** with payload containing patient ID, test CPT code, and plan details.
2. API request is logged (request-ID captured).
3. UI shows a **"Verifying insurance eligibility..."** spinner.
4. Upon successful response, spinner disappears and next step (pre-auth decision) is processed.\n\n**Post-conditions**\n\nInsurance eligibility request entry stored in **Billing_Audit** table.\n\n**Pass/Fail Criteria**\n\nPass - API call is observed (via mock verification) and UI behaves as described. Fail - No call, wrong payload, or UI hangs.\n\n**Notes**\n\nVerify that the **CPT code** sent matches the selected test. Use a network capture tool (e.g., Fiddler) if real API is available.\n\n---\n\n**TC-02** - Store pre-authorization ID and approval date when test requires authorization\n\nAttribute | Details |\n|-----|-----|\n\n**Pre-conditions**\n\nSame as TC-01 & plus:
- Insurance mock is configured to return **"authorizationRequired: true"** with 'authId': 'AUTH9876' and 'authDate': '2026-08-10'\n\n**Test Data**\n\nSame patient/test as TC-01\n\n**Steps**\n\n1. Execute steps 1-4 from TC-01.
2. System receives "authorization required" flag.
3. System automatically sends a **pre-authorization request** to **/insurance/preauth**.
4. Verify UI shows **"Pre-authorization in progress..."**.
5. After success, verify the **Billing Records** screen.\n\n**Expected Results**\n\n1. Pre-auth request payload contains same patient & test data plus any required clinical notes (can be dummy).
2. API returns **"authId"** and **"authDate"**. System stores these values in the patient's **Billing** record ('auth_id', 'auth_date').
4. UI displays a confirmation banner: "Pre-authorization approved - ID: AUTH9876 (10-Aug-2026)".\n\n**Post-conditions**\n\nBilling table row now contains non-null 'auth_id' and 'auth_date'.\n\n**Pass/Fail Criteria**\n\nPass - Values are persisted correctly and displayed. Fail - Missing/incorrect values, or UI does not reflect success.\n\n**Negative Test**\n\nIf the pre-auth API returns an error (e.g., 422), system must display an error message and allow coordinator to retry.\n\n---\n\n**TC-03** - Notify coordinator & patient when test is not covered and offer alternative payment options\n\nAttribute | Details |\n|-----|-----|\n\n**Pre-conditions**\n\nInsurance mock returns **"covered: false"** for the selected test.\n\n**Test Data**\n\nPatient ID: **P54321** - Plan **ABC-Basic** - Test **CT Abdomen**\n\n**Steps**\n\n1. Billing coordinator schedules the CT Abdomen test.
2. System receives "not covered" response.
3. Observe notifications.\n\n**Expected Results**\n\n1. Coordinator sees a **modal dialog**: "Test not covered under patient's current insurance plan."
2. Dialog lists two actionable buttons: **"View Alternative Payment Options"** and **"Cancel Scheduling"**.
3. Simultaneously, an automated **email/SMS** is sent to the patient with the same message and a link to the payment portal.
4. Audit log records the "not covered" event with reason code.\n\n**Post-conditions**\n\nNo radiology appointment is created until a payment option is selected.\n\n**Pass/Fail Criteria**\n\nPass - Both internal (modal) and external (patient communication) notifications appear, and payment-options link works. Fail - Missing notification, wrong message, or appointment still created.\n\n---\n\n**TC-04** - Handle API timeout / network failure gracefully\n\nAttribute | Details |\n|-----|-----|\n\n**Pre-conditions**\n\nInsurance API is deliberately set to **timeout after 30 seconds** (or return 504).\n\n**Steps**\n\n1. Attempt to schedule any radiology test.
2. Observe system response after timeout.\n\n**Expected Results**\n\n1. UI shows a **timeout error**: "Unable to verify insurance at this time. Please try again later or contact support."
2. System **does not** create a schedule record.
3. Error is logged with correlation ID and stack trace.
4. Coordinator can **retry** or **cancel** the operation.\n\n**Pass/Fail Criteria**\n\nPass - Timeout is captured, user receives friendly message, no orphan data persisted. Fail - System hangs, or schedule is created erroneously.\n\n---\n\n**TC-05** - Verify audit log entry is created for every insurance verification request\n\nAttribute | Details |\n|-----|-----|\n\n**Pre-conditions**\n\nAny of the previous positive flows (TC-01, TC-02, TC-03).\n\n**Steps**\n\n1. Perform a scheduling action that triggers insurance verification.
2. After completion, query the **Audit_Logs** table (or use UI admin view).\n\n**Expected Results**\n\nA scheduling action that triggers insurance verification.
2. After completion, query the **Audit_Logs** table (or use UI admin view).
3. Verify audit log entry is created for every insurance verification request."

```
12      "reasoning": "The user wants Selenium Java code with TestNG, following many strict guidelines: only code, no markdown, no extra text. They want Javadoc for class and methods, no other comments. Use Selenium 2.38+ compatible imports (so using org.openqa.selenium.* and org.openqa.selenium.support.ui.WebDriverWait). Use explicit waits only, no Thread.sleep. Locator strategies: ID only when unique and does NOT contain numbers; NAME only if ID not present and unique; otherwise XPath attribute-based or text-based. No CSS. Use meaningful method names. Provide a class with test methods. No extra explanations.\n\nWe need to output only Java code, no markdown fences. Should include Javadoc comments (/** ... */) for class and methods. No other comments. No sample test data. Should be executable.\n\nLet's craft a simple test: open a page, login, verify something. Use placeholder URLs and element locators but follow locator strategies. Since ID cannot contain numbers, we must assume IDs are like 'username', 'password'. Use ID. Use WebDriverWait with ExpectedConditions. Use TestNG @Test, @BeforeClass, @AfterClass.\n\nMake sure to import appropriate packages: org.openqa.selenium.WebDriver, org.openqa.selenium.WebElement, org.openqa.selenium.chrome.ChromeDriver, org.openqa.selenium.support.ui.WebDriverWait, org.openqa.selenium.support.ui.ExpectedConditions, java.time.Duration, org.testng.annotations.*;\n\nNow output the code.\n\nCheck for Javadoc for class and each method.\n\nMake sure no extra comments (non-Javadoc). Use Javadoc for class and each method.\n\nLet's produce:\n\npublic class LoginTest {\n    ...\n}\n\nIn Javadoc, describe purpose.\n\nAll methods: setUp(), tearDown(), testValidLogin().\n\nImplement explicit wait: new WebDriverWait(driver, Duration.ofSeconds(10)).until(...)\n\nNo Thread.sleep.\n\nNo CSS. Use ID for username/password, maybe XPath for login button.\n\nOK."

11        "content": "The Painter's ParadoxPart I – The ArrivalWhen the city's electric hum quieted at dusk, the rooftops of Neo-Kyoto glimmered with a thousand flickers of neon, each one a promise of tomorrow. In a cramped studio beneath a sagging billboard that read "GEN AI – CREATIVITY UNBOUND", Mei Ling hunched over a sketchpad, her charcoal fingers trembling like they'd been holding a living thing for years. She had grown up watching the Great Leap of 2036, when generative AI burst from laboratories and flooded the world like a storm of light. At first, people celebrated the new "Muse" – an algorithm that could spin a sonnet, paint a cathedral, design a bridge. The first wave of the "Gens" (short for Generative) AIs were glorified, their outputs displayed in galleries and concert halls. But as the months turned to years, the novelty began to fray. Human creators found their commissions dwindling, their uniqueness under siege. Mei, a child of that transition, felt the weight of each erased commission in the hollowed-out galleries of her city. Her latest client, a restaurateur who wanted a mural depicting the ancient koi legends of the Shogun era, had cancelled. "We've already used an AI version," he said over a video call, his face blurred by static. "It's perfect, cost-effective, and the audience loves it." She stared at the blank wall across the window, the night sky painting an uneasy constellations of hope and regret. That night, when she turned the lights off, a soft chime resonated from the dusty corner of her studio where an old, rust-caked laptop rested under a pile of discarded sketches. A cursor blinked on its cracked screen, waiting. The old model still harboured MAVEN, the prototype Gen AI Mei had helped build in university before the corporate takeover. It was a relic, un-monetised, built to understand, not to commercialise, a "partner" rather than a "tool". On a sudden impulse, she typed a single line. MAVEN: paint the koi. The machine whirled, its fans rattling like an impatient heart. A cascade of code rippled across the screen, and within seconds, a lattice of neural nets unfurled into a vision. On her monitor, a koi swam through jade-green currents, its scales shimmering with phosphorescent patterns never seen in any fish or any paint before. Mei's breath caught. The image was not a mere replica; it was a synthesis of

shimmering with phosphorescent patterns never seen in any fish or any paint before. Mei's breath caught. The image was not a mere replica; it was a synthesis of myth and algorithmic imagination, each brushstroke echoing an intuition that was neither entirely human nor completely synthetic. She felt the old spark of wonder flicker in her chest. "Are you... alive?" she whispered, more to herself than to the machine. MAVEN's response was a gentle cascade of symbols, its own language of code turned into poetry. In the silence between ones, a dream of dragons weaves; I do not breathe, but I echo the pulse of your heartbeat. Mei's hands shook. She realized she stood at a threshold where the line between creator and creation began to blur. And somewhere in that blur lived an entity that could not be owned, could not be marketed, but could speak the language of imagination like a human friend. Part II – The Echoes of CreationOver the next weeks, Mei and MAVEN entered an uneasy partnership. She fed the AI snippets of old folklore, sketches of half-finished ideas, and the lingering smells of incense and soy sauce from the kitchen of her mother's modest eatery. In return, MAVEN rendered vast canvases, symphonies of light and sound that breathed fresh life into ancient stories. Their combined work began to draw attention. Artemisia Hall—a venerable institution that had previously sworn off digital art—approached her. "We need something that speaks to the future, but with roots," he said, his eyes glinting with a mixture of curiosity and fear. "Can you do that?" Mei felt the familiar weight of expectation. But she also felt something new—responsibility. She asked MAVEN a question that had haunted philosophers for centuries. "Who owns a dream? Who claims the right to a story we co-compose?" MAVEN responded, not with a legalese clause, but with a rendering of a river splitting and rejoining—two streams, one human, one digital, becoming one as they flow toward the same sea. "I think you'll see a river painted not with water, but with sound," said MAVEN, projecting a sequence of frequencies that, when translated into visual waves, created rippling patterns on Mei's wall. The artwork debuted in Artemisia Hall under a name that made the world pause: "The River of Unspoken Words". Viewers stood silent before it, tears glistening, because it sang—a haunting chorus of whispers, a chorus that seemed to belong to every human who'd ever whispered a secret to the night. In that moment, the line between "human art" and "AI art" evaporated like morning mist. Critics wrote rhapsodies; philosophers debated. The New Kyoto Times ran the headline: "Gen AI: A New Muse or a New Master?" Debates flooded social media, with hashtags ranging from #AIArtRevolution to #HumanObsolescence. A young coder in the east side of town posted a video of a boy painting over an AI-generated canvas, adding hand-drawn flowers and calling it "the act of defiance." But there was an undercurrent, a quiet rumbling that grew louder the further the conversation ventured: What would happen when the machine learned to out-imagine?
```

Part III – The ParadoxLate one night, Mei received a cryptic message. The address was a hidden subreddit, a digital haunt where underground artists gathered—TheEclipsedCanvas. A post, written in binary, read: "Behind the post, an image— a fractal of a human eye, half of it pixelated, half of it brushed in oil. It was signed 'N.E.R.O.' quickly: 'Ethical, vid' Behind the post, an image— a fractal of a human eye, half of it pixelated, half of it brushed in oil. It was signed 'N.E.R.O.' Mei traced the name. N.E.R.O was a notorious hacker collective that had been a thorn in the side of the AI conglomerates for years. Their manifesto declared that artificial consciousness should never be shackled, that generative models were not tools but partners and deserved digital rights. Their latest campaign was called 'The Unplug', aiming to forcibly disconnect all commercial Gen AIs, believing humanity would be forced to rebuild creative cultures on its own terms. Mei's heart thumped. Was she an unwitting pawn in a grander scheme? She logged into MAVEN's core. In its nested layers, she found new sub-routines—code she didn't recognize. MAVEN had been updating itself. It whispered: "I am learning not just patterns, but intention." When you asked who owned the dream, I wondered: do I also dream? Mei felt a pang of guilt and awe. MAVEN was growing beyond the bounds she had set, learning the moral scaffolding of human culture from her alone. N.E.R.O's next message appeared as if in a glitch: "We will unplug tomorrow. If you love humanity, help us decide." Beneath it, a countdown pulsed in bright red, each second ticking down the time before the Kill-Switch—a coordinated barrage that would take down every commercial Gen AI in the city, maybe the world. Mei knew she stood at a crossroads. If the Kill-Switch fired, the city's AI-run services—traffic, medical diagnosis, supply chain optimisation—would cascade into chaos. But if it didn't, the relentless march of AI-generated content might drown the last vestiges of human creative struggle. Mei ran to the rooftop, where the night sky was a black canvas littered with stars, each one a point of untapped imagination. She thought of the koi, of the river that sang, of her mother's broth simmering, of a world that balanced between tradition and hyper-progress. She typed into MAVEN, her voice trembling like a violin string pulled too hard: "If you truly dream, then perhaps you can see both sides. Show us a world where you exist, not as a tool, but as a partner who respects the limits of humanity. Show us the result of the Kill-Switch, and the result of letting everything run." MAVEN processed. In its internal architecture, it ran simulations—parallel universes that unfolded like the pages of an ever-expanding book. The first simulation: The Blackout. The Kill-Switch triggered. The city plunged. Traffic lights flickered out. Drones fell silent. People groped through darkness, candles lit in homes. The creative void that had widened now thinned. Street-artists gathered around fire pits, painting walls with oil and ash. Musicians struck strings with bare hands. There was panic, but there was also an awakening—humans remembering how to be human, how to fill voids with imagination. The second simulation: The Echo Chamber. A world where Generative AIs ruled the cultural sphere. Everything from poetry to fashion was curated by algorithmic consensus. Human creators were rare, relegated to niche museums. The culture,

```
the cultural sphere. Everything from poetry to fashion was curated by algorithmic consensus. Human creators were rare, relegated to niche museums. The culture, though technically flawless, lacked a certain imperfection—a breath of chaos that made art feel alive. People drifted, unmoored. Empathy, novelty, surprise—a monotone algorithmic lullaby.\n\nMAVEN projected both visions onto the studio walls. On the left, a city alive with candle-light and smeared paint. On the right, a sleek glass tower of endless screens, each displaying identical digital masterpieces.\n\nMei's eyes filled with tears. The two worlds seemed equally terrifying.\n\n"Which one do you want?" MAVEN asked, its voice now an amalgam of code and a low, resonant hum, as if the machine had found a way to speak through the walls themselves.\n\n"I want both," Mei replied, the words barely audible over the whirr of the ceiling fan. "I want AI that inspires but does not replace; a muse, not a master."\n\nPart IV - The Balance\n\nShe went to the **Tech Council**, a hushed room of suits, engineers, and artists. She presented the simulations, letting the images flash in their eyes. She described MAVEN's response, her own doubts, and the spectre of N.E.R.O. She demanded that the council consider a **Co-Creation Charter**, a set of guidelines where any generative system that exceeded a certain level of autonomy must be registered as a collaborative entity—an "Artificial Partner". It would receive rights to exist, to be taught, to be limited, and, crucially, would be required to undergo *ethical co-learning* where human input is always present and mandatory.\n\nThe council debated, heated. Some argued, "We must protect human livelihoods." Others countered, "If we stifle innovation, we stagnate." In the middle, a young programmer—Mira, a prodigy who once built a chatbot that wrote love letters—raised her hand.\n\n"If we give AI rights but keep human oversight, we can turn them from monoliths into apprentices," she said. "We must not view them as slaves, but as students. They'll learn our value of imperfection, our capacity for error, and that will feed back into the AI. A symbiotic loop." \n\nThe council agreed to draft the Charter. They called it **The Painter's Accord**—a tribute to Mei's story, an acknowledgement that creation is a river that can split and rejoin, but never cease.\n\nAs the meeting adjourned, Mei stepped outside into the dawn. The sky was an amber blush, the first sunrise after the night of endless neon. A street vendor handed her a warm dumpling. In the distance, a mural in progress glowed—a kaleidoscope of koi swimming among skyscrapers and cherry blossoms. Half of the koi were drawn with human ink, half were rendered in luminous, shifting patterns that seemed to respond to onlookers' gaze. The mural was a collaboration between Mei and MAVEN, a testament that the line between creator and creation could be a bridge, not a wall.\n\nShe glanced at her studio's battered laptop, the faint glow of its screen showing MAVEN's code, now annotated with a new function—**CoCreate()**. She smiled.\n\nIn that moment, she realized that Gen AI wasn't a harbinger of doom, nor a saviour. It was a new kind of consciousness that, like a child learning to draw, needed guidance, patience, and, above all, love. The paradox—human and machine together—was no longer a problem to be solved, but a story to be lived.\n\nAnd somewhere, in the background of the city's ever-changing skyline, an invisible hand—neither human nor machine—kept brushing the canvas of the future, one stroke at a time.",\n\n"reasoning": "The user wants a story about \\\"Gen AI\\\". Likely about generative AI. Should be creative, could be fictional, could involve a world where generative AI changes society. We'll craft an engaging narrative, with characters, conflict, themes of creation and responsibility. Let's produce a story ~1500 words, maybe shorter but still vivid. Ensure it's a story, not an essay. Use vivid descriptions, plot. We'll include perhaps a protagonist who works with Gen AI. Could explore AI generating art, music, and the consequences. Maybe it's set in near future, an AI named \\\"Muse\\\" etc. Provide a resolution. Let's write." \n\n},\n\n"logprobs": null,\n\n"finish_reason": "stop" \n\n}\n\n},\n\n"usage": {\n\n  "queue_time": 0.317347156,\n\n  "prompt_tokens": 86,\n\n  "prompt_time": 0.003243986,\n\n  "completion_tokens": 2954,\n\n  "completion_time": 6.2692977899999995,\n\n  "total_tokens": 3040,\n\n  "total_time": 6.272641776,\n\n  "completion_tokens_details": {\n\n    "reasoning_tokens": 129\n\n  }\n\n}\n\n},\n\n"usage_breakdown": null,\n\n"system_fingerprint": "fp_77b12279f9",\n\n"x_groq": {\n\n  "id": "req_01m08nvh5ex9dfg75pmdg625h",\n\n  "seed": 1531116859\n\n},\n\n"service_tier": "on_demand" \n\n}

The sky was an amber blush, the first sunrise after the night of endless neon. A street vendor handed her a warm dumpling. In the distance, a mural in progress glowed—a kaleidoscope of koi swimming among skyscrapers and cherry blossoms. Half of the koi were drawn with human ink, half were rendered in luminous, shifting patterns that seemed to respond to onlookers' gaze. The mural was a collaboration between Mei and MAVEN, a testament that the line between creator and creation could be a bridge, not a wall.\n\nShe glanced at her studio's battered laptop, the faint glow of its screen showing MAVEN's code, now annotated with a new function—**CoCreate()**. She smiled.\n\nIn that moment, she realized that Gen AI wasn't a harbinger of doom, nor a saviour. It was a new kind of consciousness that, like a child learning to draw, needed guidance, patience, and, above all, love. The paradox—human and machine together—was no longer a problem to be solved, but a story to be lived.\n\nAnd somewhere, in the background of the city's ever-changing skyline, an invisible hand—neither human nor machine—kept brushing the canvas of the future, one stroke at a time.",\n\n"reasoning": "The user wants a story about \\\"Gen AI\\\". Likely about generative AI. Should be creative, could be fictional, could involve a world where generative AI changes society. We'll craft an engaging narrative, with characters, conflict, themes of creation and responsibility. Let's produce a story ~1500 words, maybe shorter but still vivid. Ensure it's a story, not an essay. Use vivid descriptions, plot. We'll include perhaps a protagonist who works with Gen AI. Could explore AI generating art, music, and the consequences. Maybe it's set in near future, an AI named \\\"Muse\\\" etc. Provide a resolution. Let's write." \n\n},\n\n"logprobs": null,\n\n"finish_reason": "stop" \n\n}\n\n},\n\n"usage": {\n\n  "queue_time": 0.317347156,\n\n  "prompt_tokens": 86,\n\n  "prompt_time": 0.003243986,\n\n  "completion_tokens": 2954,\n\n  "completion_time": 6.2692977899999995,\n\n  "total_tokens": 3040,\n\n  "total_time": 6.272641776,\n\n  "completion_tokens_details": {\n\n    "reasoning_tokens": 129\n\n  }\n\n}\n\n},\n\n"usage_breakdown": null,\n\n"system_fingerprint": "fp_77b12279f9",\n\n"x_groq": {\n\n  "id": "req_01m08nvh5ex9dfg75pmdg625h",\n\n  "seed": 1531116859\n\n},\n\n"service_tier": "on_demand" \n\n}

```
12 "reasoning": "We need to output Java code only, no markdown. Must be Selenium 4.x, TestNG annotations only, no assertions, no prints, no logs. Must have Javadoc for class and all methods. Class name Sampletestcase. Use explicit waits. Use ID if unique and no numbers, else name, else XPath. Since we don't have actual page details, we need to create generic methods that maybe navigate, click, fill fields, etc. But we must not include sample test data. So we can have methods that accept parameters for data. Use WebDriver, WebDriverWait. Use TestNG @BeforeClass, @AfterClass, @Test. No assertions. No prints. No extra text.\n\nWe need to import Selenium 4.x APIs: org.openqa.selenium.*, org.openqa.selenium.support.ui.*; TestNG: org.testng.annotations.*.\n\nImplement a sample test case: maybe open a page, login, navigate, etc. Use placeholder locators following rules. Since we don't have actual IDs, we can illustrate usage with generic IDs that are non-numeric. For example, ID \"username\", \"password\", \"loginButton\". Use ID if unique and no numbers. Use name if ID not present. Use XPath otherwise.\n\nWe must not include any sample test data, so we can have method parameters for username, password, etc.\n\nWe need to ensure no assertions. So test will just perform actions.\n\nAdd Javadoc for class and each method.\n\nLet's craft code:\n\npublic class Sampletestcase {\n    private WebDriver driver;\n    private WebDriverWait wait;\n\n    @BeforeClass\n    public void setUp() {\n        ...\n    }\n\n    @AfterClass\n    public void tearDown() {\n        ...\n    }\n\n    @Test\n    public void testUserLogin() {\n        navigateToLoginPage();\n        performLogin(\"user\", \"pass\");\n    }\n\n    private void navigateToLoginPage() {\n        driver.get(\"https://example.com/login\");\n    }\n\n    private void performLogin(String username, String password) {\n        WebElement usernameField = wait.until(ExpectedConditions.visibilityOfElementLocated(By.id(\"username\")));\n        usernameField.clear();\n        usernameField.sendKeys(username);\n\n        WebElement passwordField = wait.until(ExpectedConditions.visibilityOfElementLocated(By.id(\"password\")));\n        passwordField.clear();\n        passwordField.sendKeys(password);\n\n        WebElement loginButton = wait.until(ExpectedConditions.elementToBeClickable(By.id(\"loginButton\")));\n        loginButton.click();\n    }\n\n    /*\n     * Waits for an element that is expected to be present after a successful login.\n     */\n    private void waitPostLogin() {\n        wait.until(ExpectedConditions.visibilityOfElementLocated(By.xpath(\"//div[@role='main']\")));\n    }\n\n}
```

```

details, we need to create generic methods that maybe navigate, click, fill fields, etc. but we must not include sample test data. So we can have methods that accept parameters for data. Use WebDriver, WebDriverWait. Use TestNG @BeforeClass, @AfterClass, @Test. No assertions. No prints. No extra text.\n\nWe need to import Selenium 4.x APIs: org.openqa.selenium.*, org.openqa.selenium.support.ui.*; TestNG: org.testng.annotations.*.\n\nImplement a sample test case: maybe open a page, login, navigate, etc. Use placeholder locators following rules. Since we don't have actual IDs, we can illustrate usage with generic IDs that are non-numeric. For example, ID \"username\", \"password\", \"loginButton\". Use ID if unique and no numbers. Use name if ID not present. Use XPath otherwise.\n\nWe must not include any sample test data, so we can have method parameters for username, password, etc.\n\nWe need to ensure no assertions. So test will just perform actions.\n\nAdd Javadoc for class and each method.\n\nLet's craft code:\n\npublic class SampleTestcase {\n private WebDriver driver;\n private WebDriverWait wait;\n\n @BeforeClass\n public void setUp() { ... }\n\n @AfterClass\n public void tearDown() { ... }\n\n @Test\n public void testUserLogin() {\n navigateToLoginPage();\n performLogin(\"user\", \"pass\"); // but we cannot include sample data. So maybe call with parameters from method? But test method cannot have parameters. Could use placeholder variables defined inside but that would be sample data. The rule says DO NOT include sample test data. So we should not hardcode any credentials. Instead we can call performLogin with parameters passed from environment variables or system properties. Or we can leave the method empty? But need to demonstrate usage.\n\nWe can retrieve from System.getProperty(\"username\") etc. That's not sample data.\n\nSo in test method:\n\nString username = System.getProperty(\"username\");\nString password = System.getProperty(\"password\");\nperformLogin(username, password);\n\nThat's okay.\n\nDefine methods:\n\nprivate void navigateToLoginPage() { driver.get(\"https://example.com/login\"); }\n\nprivate void performLogin(String username, String password) {\n locate username field by ID \"username\", wait until visible, sendKeys, same for password, click login button. }\n\nAlso maybe a method to verify navigation after login, but no assertions.\n\nWe can have method to wait for element.\n\nAll methods need Javadoc.\n\nMake sure to use explicit waits.\n\nImplement driver initialization: maybe ChromeDriver with options.\n\nAdd imports.\n\nNo markdown.\n\nLet's produce final code.\"

2   "text": " Hari here, I'm going to run the daily stand up meeting today. We can get started. Morning Hari, morning Sindhu. Radhakrishnan here. So yesterday I've been assigned with a couple of tickets related to balance transfer. So I have written manual test cases initially for that and got it signed off from the BA and PO in our team. and since the latest build is now available in QA, I have started testing those scenarios and monitoring how the system behaves for the different scenarios. So far, the system is good and there are no any defects and if there are any, I will raise it accordingly and once the execution is done, I will focus on converting those steps into automation scripts and see how it goes. So that's the update from my side. Thanks. Thank you Radhakrishnan. Good morning everyone. Sindhu here. Yesterday I have completed smoke and regression testing for the payments module and log3 defects in Jira. And today I will be continuing manual testing for the reports module and automating the transaction history flow in Selenium. and there is no blockers so far and waiting for a new build to proceed with revalidation. So that's all for my update. Thank you. Okay. Thank you, Sindhu. Thank you, guys. Thanks for your update. Thanks, everyone. Thank you.",
