1. Vector Search Pipeline

SEMANTIC AI SEARCH

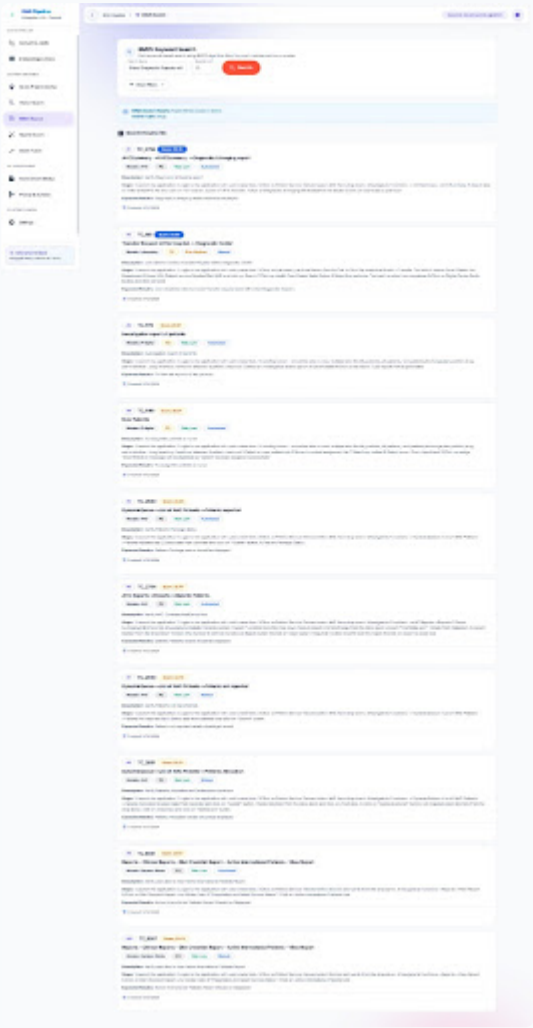

Semantic vector search execution showing query performance, similarity score rankings, and detailed result matching.

2. BM25 Keyword Search

LEXICAL SEARCH

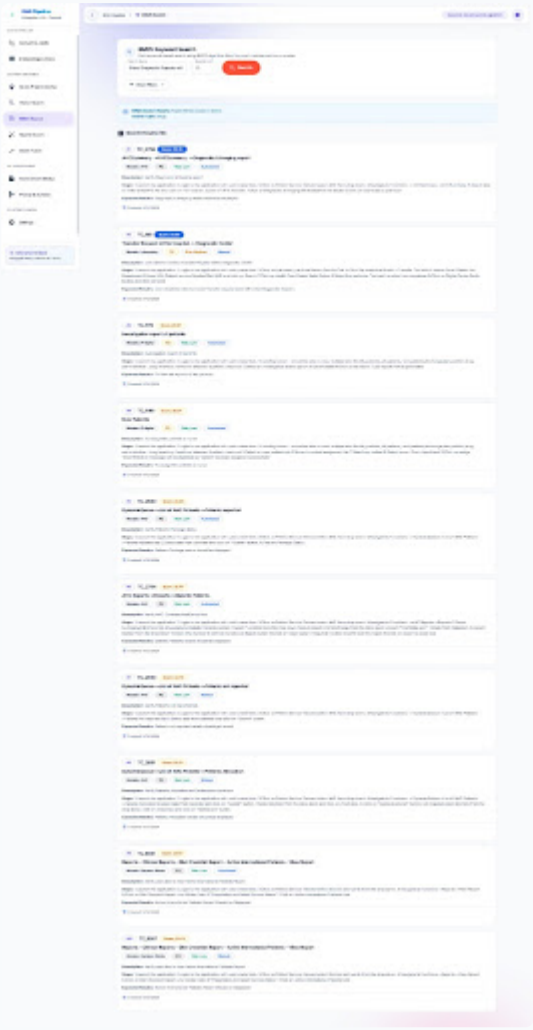

BM25 keyword-based search interface evaluating exact phrase queries and relevant document score distribution.

3. BM25 Search Results Breakdown

RESULT ANALYSIS

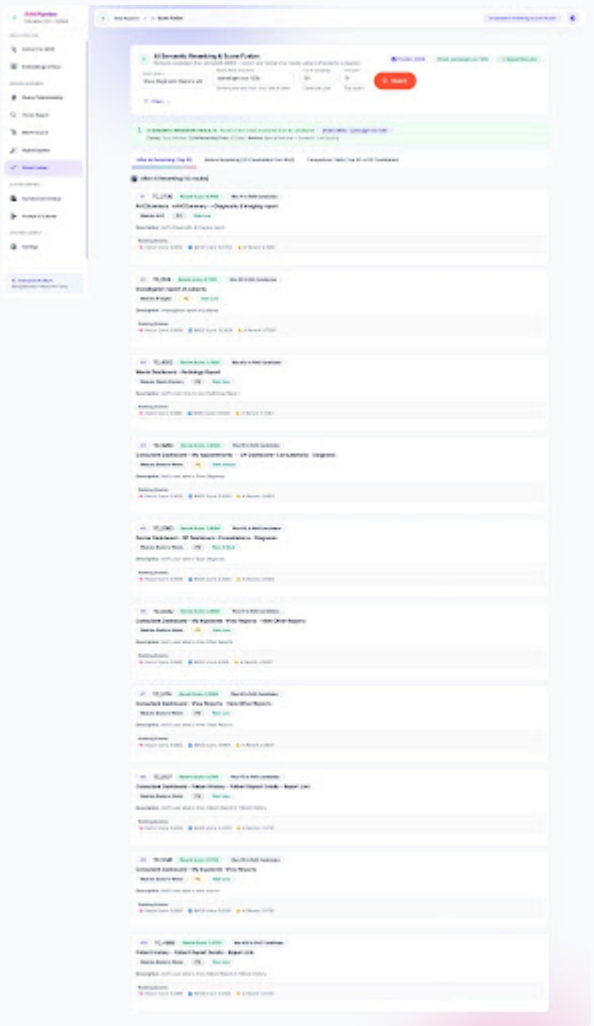

Detailed breakdown of top keyword query matches with relevance scores and automated tag metadata.

4. AI Semantic Reranking & Score Fusion

HYBRID RERANKING

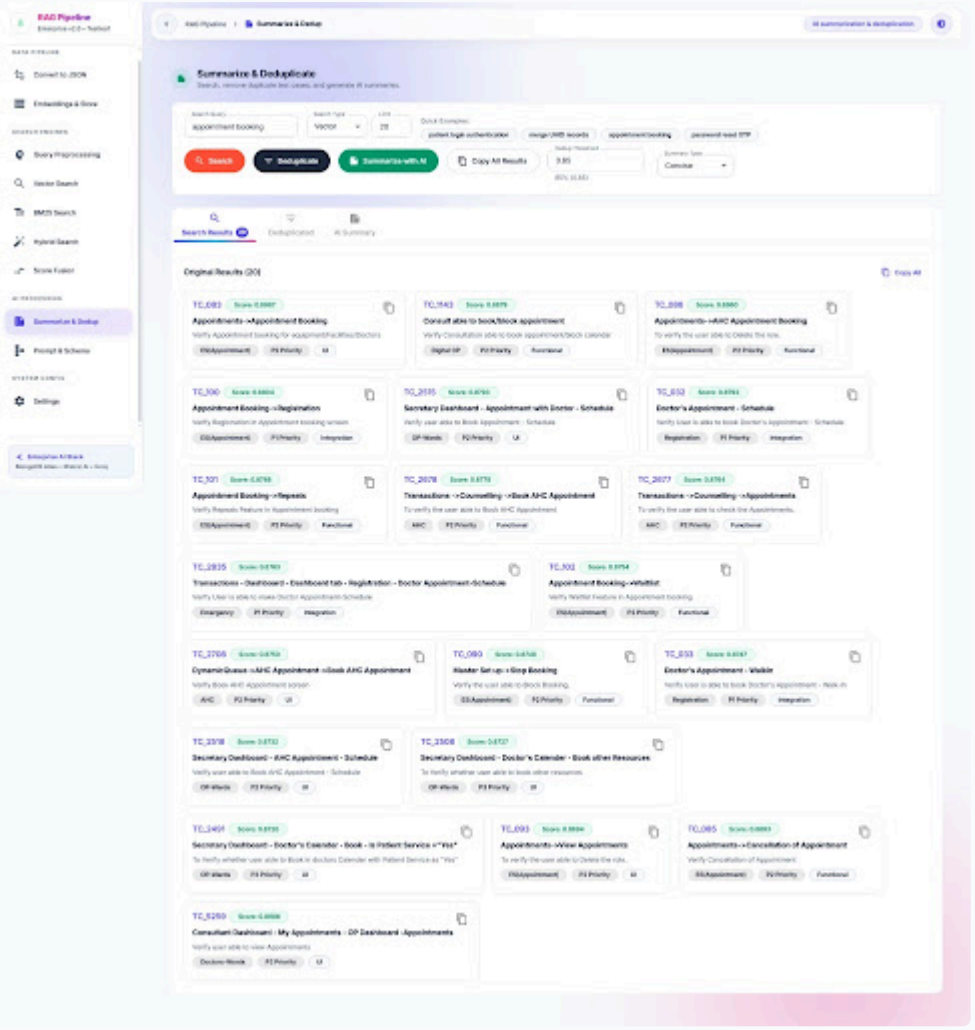

Reranking stage fusing vector and BM25 search outputs using LLM semantic evaluation for top candidate reranking.

5. Original Search Results Index

CANDIDATE POOL

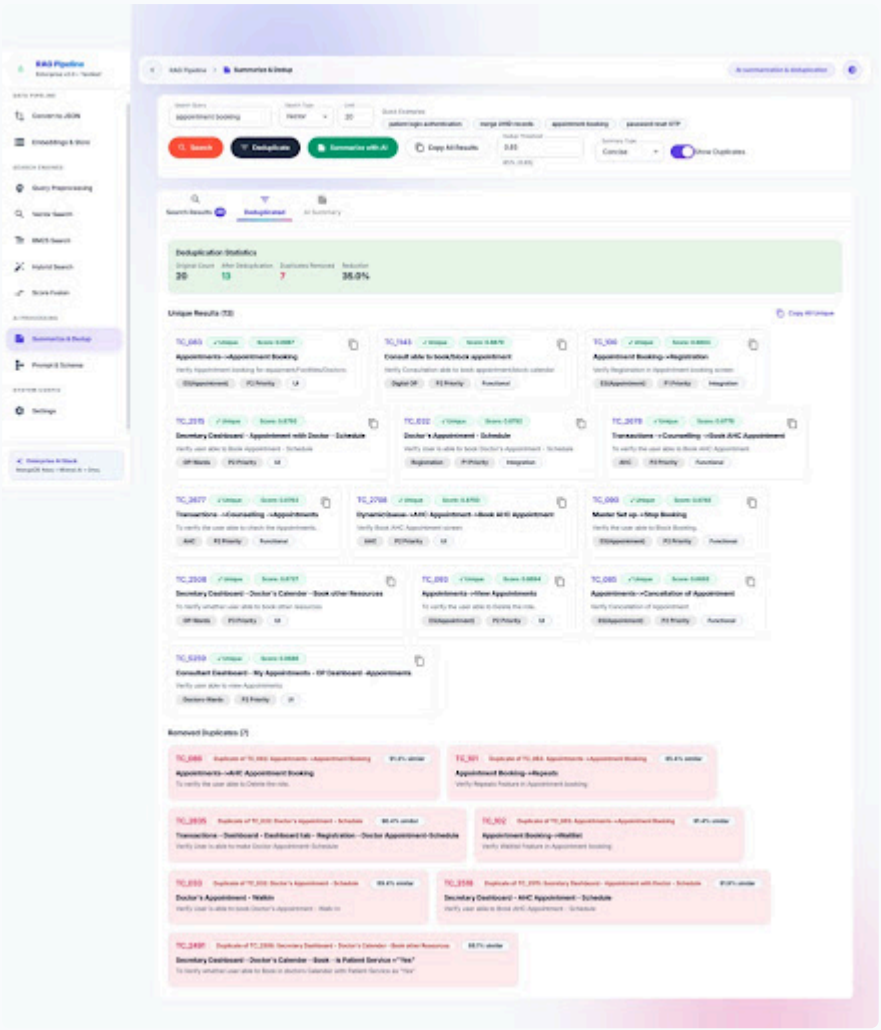

Comprehensive listing of retrieved test case results prior to deduplication and summarization processing.

6. Deduplication Engine

DATA CLEANING

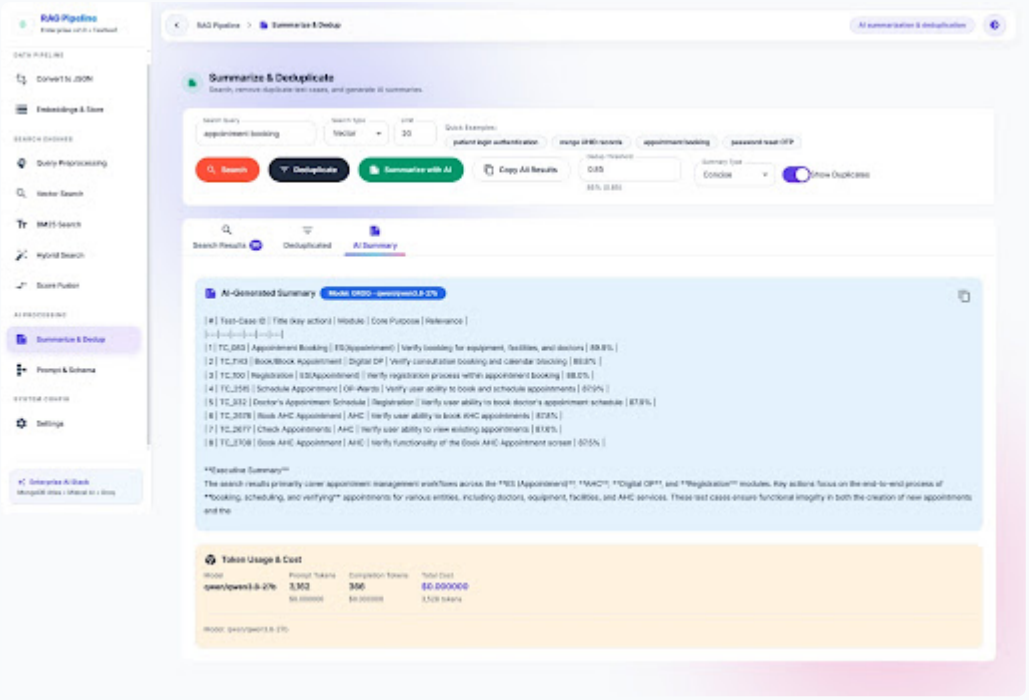

Semantic deduplication metrics, threshold parameters, unique result identification, and pruned duplicate items.

7. AI Summarization & Prompt Management

LLM SYNTHESIS

LLM-generated contextual summary of test cases alongside token usage metrics and system prompt comparison setup.

8. RAG vs. Non-RAG Test Case Comparison

EVALUATION & BENCHMARKING

Side-by-side comparative analysis of zero-context baseline test case generation against context-augmented RAG output.
